

## Invitation

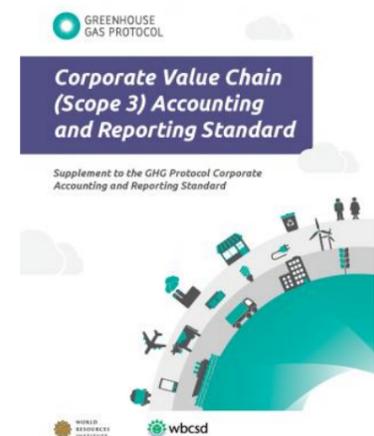

Programme in India to Build Capacity on Corporate Green House Gas (GHG) Accounting

at the  
**India International Centre, New Delhi**  
on  
15<sup>th</sup> March 2012

Including special concurrent break away sessions

### Corporate Value Chain (Scope 3) Accounting and Reporting Standard

The Corporate Value Chain (Scope 3) Standard allows companies to assess their entire value chain emissions impact and identify the most effective ways to reduce emissions. Often, the majority of total corporate emissions come from scope 3 sources, which means many companies have been missing out on significant opportunities for improvement. Users of the new standard can now account for emissions from 15 categories of scope 3 activities, both upstream and downstream of their operations. The scope 3 framework also supports strategies to partner with suppliers and customers to address climate impacts throughout the value chain.

### Product Life Cycle Accounting and Reporting Standard

The Product Standard can be used to understand the full life cycle emissions of a product and focus efforts on the greatest GHG reduction opportunities. This is the first step towards more sustainable products. Using the new standard, companies can measure the greenhouse gases associated with the full life cycle of products including raw materials, manufacturing, transportation, storage, use and disposal. The results can create competitive advantage by enabling better product design, increasing efficiencies, reducing costs, and removing risks. The standard will also help companies respond to customer demand for environmental information and make it easier to communicate the environmental aspects of products.
