**Notes:** \* Inventory data reported as "-" means either that the category was not estimated as part of the pilot, or was not relevant to the reporting company.

a. This pilot testing company reported results for two separate reporting years.

b. This pilot testing company reported separate results for two separate business units.

**Disclaimer:** The pilot testing results presented in this table represent the quantitative data submitted to the GHG Protocol Secretariat between 2022-2023 by pilot testing companies in forestry sector value chains. Companies that piloted the *2022 Draft Land Sector and Removals Guidance* (LSRG) made individual decisions about the extent and scope of the pilot exercise. Therefore, these results should not necessarily be interpreted as complete (i.e., company-wide) GHG inventory results. GHG Protocol did not audit the submitted pilot results and therefore cannot confirm if the pilot companies calculated emissions and removals in accordance with the requirements and guidance in the *2022 Draft LSRG*.
