INTRO
• Changed the name of the publication to be “Public Sector Standard”
  o Maintain consistency with its parallel position with the Corporate Standard.
  o Distinguish between the GHG Protocol pubs as the high-level frameworks, and other programs providing policy specifics.
  o Stakeholder correspondence may still use the abbreviation “PSP” for ease of shorthand, or “PSS”
• Added separate section clarifying support of LGO Protocol (iii and iv)
• Added separate section explaining how community and state-wide inventories differ from entity-wide inventories tracked here (iv)

CHAPTER 1
• Included a description of how Simplified Estimation Methods can achieve completeness while reducing reporting burden. (1-3)

CHAPTER 3
• Eliminated word “full” from operational control criteria (“full authority”), to better reflect that operational control can be exerted even when organizations do not have full authority over all aspects of the operation. (3-2,3)
  o Added expanded description of common utility-payment-leasing situations to clarify that tenant operational control is still assumed in these situations (3-13)
• Relocated Equity Share and Financial Control approaches to an Appendix (3-4)

CHAPTER 4
• Incorporated Leased Assets guidance from Appendix into Standards and Guidance portion of this chapter, and added “Tenant” and “Landlord” to lessee/lessor grouping titles for clarity

CHAPTER 5
• Emphasized that calendar year is consistent internationally (5-4)

CHAPTER 8
• Eliminated this chapter given its redundancies in other chapters, the reference to Project Standard, and the policy-neutral limitations of the Public Sector Standard to offer guidance on the use of offsets. Some definitions and examples have been pasted in Ch. 11 (Setting a Target) under #2 and #7.

Appendix A-E
• Re-ordered appendices to be stylistically appropriate, matching the order in which they were referenced in the text. They will now be labeled as follows:
  o App A: Overview of GHG Programs (previously C)
  o App B: Alternative Consolidation Approaches
  o App C: Accounting for Sequestered Atmospheric Carbon (previously B)
  o App D: Accounting for Indirect Emissions from Purchased Electricity (previously A)
  o App E: Industry Sectors and Scopes (previously D)
